

02C Host SPI: mean DELTA demand

$N = 1-10$ | $f = 0-700$ Hz | ESKD / ESKF mixture; no padding or MUL1 wrapper

Nominal periodic ESKF only: $T=1$ s; $q=\min(1,1/fT)$; $q_{\text{other}}=0$. Continuous-cycle approximation.
Mean SCK budget; no gaps, software or retries. FULL bursts may exceed a round deadline. $N>4$: extrapolation.
