

02D Host SPI: 200 Hz mean DELTA demand

N = 1-30 | nominal periodic reference q=0.005 | no padding or MUL1 wrapper

- Mean DELTA, $K_D=0$
- Mean DELTA, $K_D=240$
- FULL / mean DELTA $K_D=480$
- 10 MHz tested setting: 10 Mbit/s raw
- 40 MHz untested reference: 40 Mbit/s raw

Nominal periodic ESKF only: $T=1$ s; $q=\min(1,1/ft)$; $q_{\text{other}}=0$. Continuous-cycle approximation.
Mean SCK budget; no gaps, software or retries. FULL bursts may exceed a round deadline. $N>4$: extrapolation.
